PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

88

<b>Office Action Summary</b>	Application No. 10/669,971	Applicant(s) WINSLOW, NATHAN A.	
	Examiner Javier G. Blanco	Art Unit 3738	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 21 September 2007.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-3, 5-15, 17, 19-22, 24, 26 and 27 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-3, 5-15, 17, 19-22, 24, 26 and 27 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

**DETAILED ACTION**

***Response to Amendment***

1. Applicant's amendment of claims 1, 13, and 19 in the reply filed on September 21, 2007 is acknowledged.
2. Applicant's cancellation of claim 12 in the reply filed on September 21, 2007 is acknowledged.
3. Applicant's addition of claims 26 and 27 in the reply filed on September 21, 2007 is acknowledged.

***Claim Objections***

4. Claim 19 is objected to because of the following informalities: please substitute "with the planar surface" (see last line) with --with the planar surfaces--. Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 11 and 27 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
  - a. Regarding claim 11, the limitation "wherein said extended articulating surface has a planar "V" shaped inner surface" is indefinite as to the scope of the invention. Independent claim 1

Art Unit: 3738

recites: "a pair of intersecting planar surfaces, said planar surfaces being generally parallel to the integral straight anchoring device". Is the "said extended articulating surface has a planar "V" shaped inner surface" a different structure from "a pair of intersecting planar surfaces, said planar surfaces being generally parallel to the integral straight anchoring device"?

b. Regarding claim 27, the limitations "exterior articulating surface", "extended articulating surface", and "concave interior surface" lack antecedent basis.

***Claim Rejections - 35 USC § 102***

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

8. Claims 1-3, 6-10, and 26 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by BIOMET brochure (engineering drawings submitted 7/22/1997, and cited in Applicant's IDS of 12/17/2003).

Referring to Drawings 1-4, the BIOMET brochure disclose a monolithic resurfacing humeral implant comprising:

(i) A hemispherical exterior articulating surface;

(ii) A concave interior surface opposite said exterior articulating surface;

Art Unit: 3738

(iii) An integral (i.e., unitary) straight, tapered anchoring device (see drawings) having a textured outer surface (brochure disclosed it as a glass bead blast), said anchoring device extending from said interior surface; and

(iv) An extended articulating surface protruding from only a portion of said hemispherical exterior articulating surface, said extended articulating surface having a pair of intersecting planar surfaces, said planar surfaces being generally parallel to the integral straight anchoring device. The term “planar” is generally defined as: “Of, relating to, or situated in a plane”; “of, relating to, or lying in a plane”. The “extended articulating surface” of the BIOMET implant (see main (fourth) drawing of the BIOMET brochure below) comprises a pair of intersecting planar surfaces, said planar surfaces being generally parallel to the integral straight anchoring device, which pair of intersecting planar surfaces are each “situated in a plane” or “lying in a plane”. The second (i.e., lateral view) and fourth (i.e., main or fourth) drawings show the extended articulating surface as comprising a “step”.

Main (fourth) drawing of the BIOMET brochure shown below:

### *Response to Arguments*

9. With regards to the 102(b) rejection based on BIOMET brochure (engineering drawings submitted 7/22/1997, and cited in Applicant's IDS of 12/17/2003), Applicant's arguments filed September 21, 2007 have been fully considered but they are not persuasive.

a. The Applicant argues that the implant shown in the BIOMET brochure does not disclose newly added limitation "said extended articulating surface having a pair of intersecting planar surfaces, said planar surfaces being generally parallel to the integral straight anchoring device".

The Examiner respectfully disagrees. The term "planar" is generally defined as: "Of, relating to, or situated in a plane"; "of, relating to, or lying in a plane". The "extended articulating surface" of the BIOMET implant (see main (fourth) drawing of the BIOMET brochure above) comprises

Art Unit: 3738

a pair of intersecting planar surfaces, each of said planar surfaces are “situated in a plane” or “lying in a plane”, and being generally parallel to the integral straight anchoring device.

10. Claims 19-22 and 24 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Sutter et al. (US 4,328,593 A).

Referring to Figures 1-14, Sutter et al. disclose a method (see Figures 4 and 5; see column 5, line 65 to column 6, line 28) for resurfacing a humeral head of an implant site.

**The method comprising:**

- (i) Resurfacing the humeral head so as to remove a portion of the humeral head (compare Figure 4 to Figure 5) leaving a resurfaced surface;
- (ii) Boring a hole (Figure 5: bore/hole 11c, which will accept sleeve 7) into the humeral head;
- (iii) Resecting a portion of the humeral head (Figure 5) so as to form a pair of intersecting planar surfaces (see column 6, lines 12-15);
- (iv) Positioning a resurfacing humeral head implant (see Figures 1-14) on the resurfaced surface of the humeral head; and
- (v) Positioning an extended articulating surface (it should be noted that, from the claim language, an arbitrary line or boundary distinguishes/defines the "extended articulating surface") of the resurfacing humeral head implant in a lateral region of the humeral head so as to articulate with at least one of a bone and a ligament and interface with the planar surface. The “step region” could be the material thickness at the end (e.g., periphery) of the “extended articulating surface”.

**The resurfacing humeral head implant comprising:**

- (i) A hemispherical exterior articulating surface (e.g., cap 3);

Art Unit: 3738

(ii) A concave interior surface (e.g., 3d, or inner cap surface; see Figures 1, 3, 6, 10, 11, and 14) opposite said exterior articulating surface;

(iii) An integral (i.e., unitary, see column 9, lines 9-12) straight anchoring device (e.g., sleeve 7) having a textured outer surface (see column 5, lines 55-65), said anchoring device extending from said interior surface; and

(iv) An extended articulating surface (e.g., 3c) protruding from a portion of said hemispherical exterior articulating surface, said extended articulating surface having a pair of intersecting planar surfaces (Figures 1-3, 7, 9, and 10: ribs 3g and grooves 3f; see column 4, lines 47-64; column 5, lines 32-53), said planar surfaces being generally parallel to the integral straight anchoring device (clearly seen in Figures 1-3; see column 4, lines 47-64; column 5, lines 32-53) and forming a "V" shaped surface (see Figures 2 and 7). It should be noted that, from the claim language, an arbitrary line or boundary distinguishes/defines the "extended articulating surface". Sutter et al. disclose ribs 3g and grooves 3f are used in order to permit the prosthesis to be firmly and durably secured without cement (among other advantages; see Abstract; see column 4, lines 47-64; column 5, lines 32-53).

***Claim Rejections - 35 USC § 103***

11. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3738

12. Claims 11, 13, 15, 17, and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over BIOMET brochure (engineering drawings submitted 7/22/1997, and cited in Applicant's IDS of 12/17/2003) in view of Sutter et al. (US 4,328,593 A).

Referring to Drawings 1-4, the BIOMET brochure disclose a monolithic resurfacing humeral implant comprising:

- (i) A hemispherical exterior articulating surface;
- (ii) A concave interior surface opposite said exterior articulating surface;
- (iii) An integral (i.e., unitary) straight, tapered anchoring device (see drawings) having a textured outer surface (brochure disclosed it as a glass bead blast), said anchoring device extending from said interior surface; and
- (iv) An extended articulating surface protruding from only a portion of said hemispherical exterior articulating surface, said extended articulating surface having a pair of intersecting planar surfaces, said planar surfaces being generally parallel to the integral straight anchoring device. The term "planar" is generally defined as: "Of, relating to, or situated in a plane"; "of, relating to, or lying in a plane". The "extended articulating surface" of the BIOMET implant (see main (fourth) drawing of the BIOMET brochure below) comprises a pair of intersecting planar surfaces, said planar surfaces being generally parallel to the integral straight anchoring device, which pair of intersecting planar surfaces are each "situated in a plane" or "lying in a plane". The second (i.e., lateral view) and fourth (i.e., main or fourth) drawings show the extended articulating surface as comprising a "step".

The BIOMET brochure discloses the invention as claimed except for particularly disclosing recently added limitation "a pair of intersecting planar INNER surfaces, said planar

Art Unit: 3738

surfaces being generally parallel to an integral straight anchoring device and forming a “V” shaped surface”. However, this is already known in the art. For example, Sutter et al. disclose a monolithic resurfacing humeral implant comprising an extended articulating surface having a pair of intersecting inner planar surfaces (Figures 1-3, 7, 9, and 10: ribs 3g and grooves 3f; see column 4, lines 47-64; column 5, lines 32-53), said planar inner surfaces being generally parallel to an integral straight anchoring device (clearly seen in Figures 1-3; see column 4, lines 47-64; column 5, lines 32-53) and forming a “V” shaped surface (see Figures 2 and 7) in order to permit the monolithic resurfacing humeral implant to be firmly and durably secured without cement (among other advantages; see Abstract; see column 4, lines 47-64; column 5, lines 32-53).

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have combined the teaching of a monolithic resurfacing humeral implant comprising an extended articulating surface having a pair of intersecting planar inner surfaces, said planar surfaces being generally parallel to an integral straight anchoring device and forming a “V” shaped surface, as taught by Sutter et al., with the monolithic resurfacing humeral implant of the BIOMET brochure, in order to permit the monolithic resurfacing humeral implant to be firmly and durably secured without cement.

**NOTE:** Looking to Applicants’ specification (see paragraphs 0022 and 0027), there is no criticality in the use of a “planar “V” shaped inner surface”. Furthermore, the Applicant admits in the present application that “the resection 52 may be of various other shapes or configurations” (see paragraph 0027).

Art Unit: 3738

13. Claims 1-3, 6-13, 15, 17, 19-22, 24, 26, and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Long et al. (US PG Pub No 2004/0193277 A1) in view of Sutter et al. (US 4,328,593 A).

Referring to Figures 7-23, Long et al. disclose a monolithic resurfacing humeral implant comprising:

- (i) A hemispherical exterior articulating surface (first body articulating surface 24);
- (ii) A concave interior surface (interior surface of first body 22) opposite said exterior articulating surface;
- (iii) An integral (i.e., unitary) straight, tapered anchoring device (stem 36) having a textured outer surface (see blasted surface shown in Figure 10), said anchoring device extending from said interior surface; and
- (iv) An extended articulating surface (second body articulating surface 32 of second body 30) protruding from only a portion of said hemispherical exterior articulating surface, said extended articulating surface having at least one planar second interior surface, including a planar “V” shaped inner surface (see Figures 21 and 22). Long et al. also disclose the method as claimed in claims 19-22 and 24 (see pages 4-6), including resecting the humeral head to form planar surfaces. The term “planar” is generally defined as: “Of, relating to, or situated in a plane”; “of, relating to, or lying in a plane”. The “extended articulating surface” of the Long et al. implant comprises a second interior surface “situated in a plane” or “lying in a plane”.

A representation of Figure 22 of Long et al. (US PG Pub No 2004/0193277 A1) is shown below:

Two planar inner surfaces (forming a V-shape)

Long et al. disclose the invention as claimed except for particularly disclosing recently added limitation "a pair of intersecting planar surfaces, said planar surfaces being generally parallel to an integral straight anchoring device and forming a "V" shaped surface". However, this is already known in the art. For example, Sutter et al. disclose a monolithic resurfacing humeral implant comprising an extended articulating surface having a pair of intersecting inner planar surfaces (Figures 1-3, 7, 9, and 10: ribs 3g and grooves 3f; see column 4, lines 47-64; column 5, lines 32-53), said planar surfaces being generally parallel to an integral straight anchoring device (clearly seen in Figures 1-3; see column 4, lines 47-64; column 5, lines 32-53) and forming a "V" shaped surface (see Figures 2 and 7) in order to permit the monolithic resurfacing humeral implant to be firmly and durably secured without cement (among other advantages; see Abstract; see column 4, lines 47-64; column 5, lines 32-53). Therefore, it would

Art Unit: 3738

have been obvious to a person having ordinary skill in the art at the time the invention was made to have combined the teaching of a monolithic resurfacing humeral implant comprising an extended articulating surface having a pair of intersecting inner planar surfaces, said planar surfaces being generally parallel to an integral straight anchoring device and forming a "V" shaped surface, as taught by Sutter et al., with the monolithic resurfacing humeral implant of Long et al., in order to permit the monolithic resurfacing humeral implant to be firmly and durably secured without cement.

**NOTE:** Looking to Applicants' specification (see paragraphs 0022 and 0027), there is no criticality in the use of a "planar "V" shaped inner surface". Furthermore, the Applicant admits in the present application that "the resection 52 may be of various other shapes or configurations" (see paragraph 0027).

14. Claim 5 and 14 rejected under 35 U.S.C. 103(a) as being unpatentable over Long et al. (US PG Pub No 2004/0193277 A1), as modified by Sutter et al. (US 4,328,593 A), and further in view of Copeland™ Humeral Resurfacing Head (Biomet Orthopedics, Inc.: 2000 brochure).

Long et al., as modified by Sutter et al., disclose the invention as claimed in claims 1-3, 6-13, 15, 17, 19-22, 24, 26, and 27. Long et al. did not particularly disclose the stem as having flutes. However, this is well known in the art. For example, the Copeland brochure discloses a monolithic resurfacing humeral implant comprising a tapered post having flutes/ribs in order to improve the mechanical press-fit and prevent rotation of said implant. Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have combined the teaching of a monolithic resurfacing humeral implant comprising a tapered

Art Unit: 3738

post having flutes/ribs, as taught by the Copeland brochure, with the monolithic resurfacing humeral implant of Long et al., in order to improve the mechanical press-fit and prevent rotation of said implant.

### *Conclusion*

15. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Javier G. Blanco whose telephone number is 571-272-4747. The examiner can normally be reached on M-F (9:00 a.m.-7:00 p.m.), first Friday of the bi-week off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Corrine McDermott can be reached on (571) 272-4754. The fax phone numbers for the organization where this application or proceeding is assigned is 571-273-8300 for regular

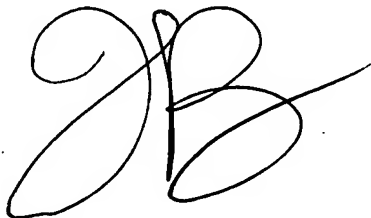

Art Unit: 3738

communications and After Final communications. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0858.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
